

ELIASON®

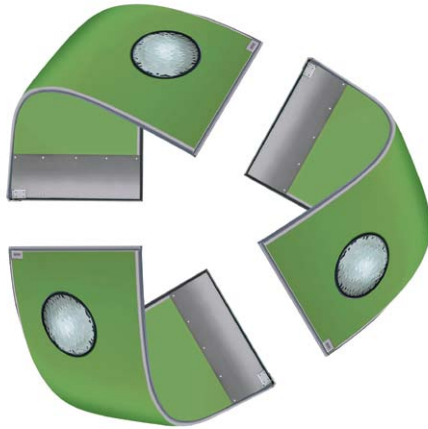

We  
think  
green.

Environmental responsibility  
without the additional cost.

As “green” becomes increasingly important to our world, Eliason is committed to continually finding new ways to be environmentally-friendly by providing a safe and healthful work place, protecting the environment, and conserving energy and natural resources.

# Eliason is renewal.

Eliason offers an environmentally-friendly line of products, easy to recycle and reuse. Our products are made of wood, plastic, stainless steel, and aluminum providing the ultimate combination of durability and eco-friendliness. Eliason has an extensive recycling program to ensure that all waste is recycled. We also work with suppliers that reclaim a substantial portion of the waste generated by their own manufacturing operations.

## Eliason is sustainable.

It has always been our philosophy to develop products that are sustainable, re-usable, and consume as little material as possible in order to minimize waste and environmental impact. Before the term “green” was in use, Eliason engineers were adamant on producing quality products friendly to the environment.

## Eliason is green.

We utilize manufacturing processes that do not adversely affect the environment, including developing and improving operations and technologies to minimize waste, prevent air, water, and other pollution, minimize health and safety risks, and dispose of waste safely and responsibly.
